

The DRX-4C2 is equipped with an NTEP-approved, legal-for-trade counting feature for prescription filling. The counting feature is easy to use and accurate as it counts up to 90 pills per second. The counting feature is designed in the form of a short wizard which leads the user step-by-step through this simple operation, allowing the user to select a preferred sample size for determining average piece weights and to verify the sample weight. The feature is very user-friendly with the counting process usually taking only a few seconds to complete.
