

APA is an advanced pill counting algorithm that quickly and efficiently adjusts for pill weight variations providing even greater accuracy when filling prescriptions. The feature is very easy to use and requires little user interaction. The feature can be used to update the Average Piece Weights (APW) for drugs during a regular pill counting transaction or an update of the database which is stored on the system server. This system not only improves counting accuracy, it also speeds up the process significantly and eliminates the need for the pharmacist to count pills manually when updating average piece weights.
